

BAR STOOL BUYING GUIDE

CHOOSE A HEIGHT

Simply measure the surface height and choose a stool size (bar or counter) that allows around 10" of space between the seat and the counter top. You'll sit comfortably, even with legs crossed.

GET THE SPACING RIGHT

This will determine how many stools you'll need. The suggested measurements (approximate) will allow everyone to get in and out easily. That's all there is to it. Cheers to your great new bar stool look.
